

POST GRADUATE DIPLOMA IN CHILD COUNSELLING

**Trusted by Students
in 35 Countries**

Course Overview:

PG Diploma in Child Counselling is an advanced course offered by British Learning that focuses on imparting all the required knowledge & skills to work as an educator capable of counselling children. This course imparts thorough expertise in counselling, multicultural approaches to counselling & behavioural approaches. The course will provide all the latest Internationally updated knowledge in Child Counselling.

Mental health is as important as physical health. As an adult, it is easier to express any kind of emotion or feeling. However, for children, most of the time, it is difficult to understand the status of their mental health. Teachers & parents, being the closest to them, play an essential role in their lives.

Earlier, a Teacher's role was to impart only academic knowledge. But in modern times, a teacher needs to fulfil several roles. Counselling the children or students from time to time is now an important role.

Course Overview:

The last few years have presented numerous challenges for children. Exposure to social media, economic uncertainty, peer pressure in schools, & a new set of family issues at home have all opened unprecedented challenges for the teachers who handle them daily. Children need counselling at every step until they understand & can handle their emotions.

PG Diploma in Child Counselling course will prepare our students for different challenges in the lives of the children. Our Students will learn the psychological aspects of counselling, skills to be developed for counselling, counselling for various age groups & managing the children's stress.

Our students will also learn how to apply Theories of counselling & creative arts in their classrooms. This course will enable our students to work with individuals & groups of children to meet their counselling needs.

The cherry on the cake is that our students will be well-versed with the latest International techniques in counselling, especially for the children of the millennial generation & changing family structures.
